DriveSavers Data Recovery Inc. engaged WIRED Security Incorporated to provide an independent information security assessment including a penetration security test. The scope of this engagement included gathering information and reporting the findings based on network-based scanning, vulnerability testing and insight provided by DriveSavers Data Recovery Inc.

Security best practices were used to conduct the audit, and to measure the effectiveness of the current DriveSavers Data Recovery Inc. information security program and technology infrastructure. Performing the security assessment, the team scans the organization’s computer systems and network to identify potential vulnerabilities. All findings are recorded for further analysis and triage.

The security assessment & audit team deployed automated tools to determine security control gaps. Manual verification was performed to eliminate false positives, expanding the testing scope where required, and discovery/documentation of the information flow in and out of the computing environment.

**Approach**
- Perform broad security testing identify potential areas of exposure
- Perform targeted security testing and manual investigation to validate vulnerabilities
- Identify and validate vulnerabilities
- Rank vulnerabilities based on threat level, loss potential, and likelihood of exploitation
- Develop long-term recommendations to enhance security
- Transfer knowledge

**Executive Summary Conclusion**

The DriveSavers Data Recovery computing environment and the information hosted (as included in the assessment scope), demonstrated throughout our security audit and penetration testing, to provide adequate defense against cyber and physical threats, providing adequate information protection.

WIRED Security Inc. endorses that the DriveSavers Data Recovery computing environment provides reasonable assurances for data protection.
